Highly interactive scientific **CORE PROGRAM** with a limited number of participants, which will

- ─ provide the opportunity to learn about the role & limitations of the logic of cost effectiveness to inform health technology assessments (HTAs), how to deal with them, and promising ways how they might be overcome
- ─ teach methodological competence of HTA based on empirical & theoretical research, but also knowledge of its institutional and legal context, as well as ethical implications
- ─ offer ample room for debate between **academics, practitioners & policy makers**, introducing the distinct perspectives of citizens & patients and their future roles
